

Data analysis in Docker

`$docker build -t tutonrial-image`

• To build the image from our Dockerfile:

Name and optionally tag the
image (default tag: "latest")

(If you're following along, don't run this)

Build context: current directory

1. Write a *Dockerfile*

2. Build an *image*

3. Run a *container*

The darker build the

--build-arg port=88889

3. *Run a container*

1. Write a Dockerfile

2. Build a *in* magazine

Set the \$port variable from the

ARG instructions in the Dockerfile

```
$ docker build -t tutorial-image
```
