

Data analysis in Docker

Goal: create an environment that:

• has Python installed

- contains all packages needed for analyses

• can run Jupyter notebooks

is isolated from the host machine, but has access to it

• **is easy to create, use, tweak, and share**

• will always be exactly the same, no matter where it's used

Data analyses in Docker

Goal: create an environment that:

- has Python installed
- contains all packages needed for analyses
- can run Jupyter notebooks
- is isolated from the host machine, but has access to it
- is easy to create, use, tweak, and share
- will always be exactly the same, no matter when or where it's used

Data analyses in Docker

Steps to create and use our environment:
